

Client Feedback Log

Project: Huddle (PWA) | Developer: Michael L

Sprint	Sprint	Client Feedback	Response
Pre-sprint 1	Pre-Sprint (Requirements)	Must-Have Functional Requirements: • Voting features • Event proposal system • Group creation and management • User authentication • Attendance tracking Nice-to-Have Functional Requirements: • Role assignment for group members • Saving popular / repeated roles • Pin location on an interactive map for the group Must-Have Non-Functional Requirements: • Availability • Responsiveness • Data security Nice-to-Have Non-Functional Requirements: • Usability: new users can create/join a group and post an event in under 3 minutes • Scalability: backend/SQL database able to hold 50 concurrent group members voting	Requirements documented and used to define Sprint 1 and Sprint 2 backlog items.
Post-Sprint 1	Sprint 1 (client demo)	<i>“Secure form feedback has an empty page - it leads to a ‘not found’ error”</i> <i>“Logout button failed. It just took me back to the home screen”</i>	• Added missing route for the secure form template button. • Changed logout route to return to the login page and clear all session keys.

Sprint	Sprint	Client Feedback	Response
Sprint 2	Sprint 2	<i>"Here are some inputs that I want for the event creation screen"</i> • Name • Location • Date – when it will happen • Date range for longer events • Description – what will happen in more detail • Time of arrival • Category / classifiers e.g. food trip – little title card • Price estimate – optional	Implemented all requested input criteria. Date can be expressed over multiple days; the second date input is optional.
Sprint 2	Sprint 2	<i>"For the role allocation, instead of it being from predetermined options, can the selection be inputted manually? Like a custom one?"</i>	Implemented a custom role feature connected to the group database, allowing custom roles to be created per group and assigned to members.
Sprint 2	Sprint 2	<i>"Can you also allow the vote to be changed/voted for inside the actual event details page please? I feel like it would be more convenient if the friend can read the full details and see the location and then have the option to change their mind."</i>	Implemented voting buttons on the event details page in addition to the main huddle page. Users can vote from either screen – giving flexibility to scroll through pending events quickly or read full details before deciding.
Sprint 2	Sprint 2	<i>"The event page is ok, but I'd prefer if it looked something like this"</i> <i>*Client and I drew up a page layout for the huddle event screen.</i> 	Implemented core features from the client sketch: • Role allocation by group leader via dropdown • Custom role allocations unique to the group • Event location is prominently displayed • Each member's vote shown directly next to their name • Name, time, and vote percentages are clearly headed • Members can still vote from within the event details screen

Sprint	Sprint	Client Feedback	Response
Post-sprint 2	Sprint 2 (client demo)	<i>No issues raised - client satisfied with sprint deliverables.</i>	N/A
Sprint 3	Sprint 3	<i>"For the front-end theme, I think something Modern/techy but also inclusive and appealing for all ages and people, especially if the web app eventually progresses into something businesses can use to organise meetings; the frontend should be somewhat professional."</i>	Implemented a modern, professional frontend theme. Colours and styling are consistent throughout the entirety of the web app. GitHub Copilot assisted with some of the CSS and more complex HTML.
Post-sprint 3	Sprint 3 (client demo)	<i>No issues raised - client satisfied with sprint deliverables.</i>	N/A
Sprint 4	Sprint 4	<i>With sprint 4 being primarily documentation, client was pleased and had nothing to say</i>	N/A
Post-Sprint 4	Sprint 4	<i>No issues raised - client satisfied with sprint deliverables.</i>	N/A
